

Meeting Details

Meeting Title: SwiftRoute Product Scoping Meeting **Date:** July 8, 2025 **Time:** 10:00 AM - 10:25 AM IST **Location/Platform:** Virtual Call **Attendees:** Ms. Anya Sharma, CEO, SwiftServe Logistics; Mr. Rahul Gupta, Lead Developer, Innovate Solutions **Absent:** Not mentioned in the source document.

Meeting Agenda / Purpose

The primary purpose of the meeting was to discuss the core concept and initial requirements for a new intelligent route optimization and delivery management platform, tentatively named "SwiftRoute," for SwiftServe Logistics.

Discussion Summary

- **Project Overview:** SwiftServe Logistics aims to develop "SwiftRoute" to address inefficiencies in their current manual routing system as operations scale.
- **Core Functionality - Route Optimization:** The platform needs to dynamically calculate efficient delivery routes, considering real-time data such as traffic conditions, weather, road closures, vehicle capacity, delivery time windows, and driver availability.
- **Fleet Management:** Key aspects include assigning drivers, real-time vehicle tracking on a map interface, and the ability to re-route drivers mid-journey due to urgent deliveries or unforeseen delays. Maintenance schedules are a potential future enhancement, not an initial priority.
- **Customer Experience:** Customers should have access to a live tracking link via a web-based portal, showing their delivery vehicle's location, an updated ETA, driver's name, and contact option. Essential notifications (dispatch, out for delivery, delivered) are also required.
- **Driver Application:** A driver-facing mobile application is critical from day one, enabling drivers to receive routes, navigation instructions, update delivery statuses, capture proof of delivery (photos/signatures), and communicate with dispatch.
- **System Integration:** SwiftRoute must seamlessly integrate with SwiftServe Logistics' existing proprietary order management system to pull orders and push status updates. API documentation will be provided.
- **Timeline and Budget:** SwiftServe Logistics targets an MVP launch within six to eight months and has a flexible budget range of ₹50-70 lakhs for this initial phase.
- **Scalability:** Both parties emphasized the importance of designing the platform with robust scalability in mind to accommodate future growth and increased delivery volumes.

Decisions Made

- The project for developing an intelligent route optimization and delivery management platform ("SwiftRoute") was agreed upon.
- The core MVP features were defined to include dynamic route optimization, real-time vehicle tracking and re-routing, a driver mobile application, and a customer web portal.
- It was agreed that the system must integrate with SwiftServe's existing order management system.
- A target timeline of 6-8 months for MVP launch and an initial budget range of ₹50-70 lakhs were established as frameworks for the proposal.

Action Items

- **Mr. Rahul Gupta** - Prepare a detailed proposal for the SwiftRoute project, outlining the scope, a more precise timeline, a breakdown of costs, and a phased approach for development. - (Due: Within the next week)

Next Steps / Future Meetings

Innovate Solutions will develop a detailed proposal for the SwiftRoute project based on the discussed requirements. Further discussions will be held upon submission and review of the proposal.
